

In the past, building often reflected the culture of a society but today all modern buildings look alike and cities throughout the world are becoming more and more similar.

What do you think the reason for this, and is it a positive or negative development?

These days, the idea that globalization will give the same living standard for people all around the world seem at first glance a fair aspiration. However, it make assumption that domestic factors of every society will be change. This also include local architecture which used to reflect culture and society of a country. There are many advantage in the recent trend of architecture but how we can offer individual characters of country's culture in every building to discriminate with others.

There are many effects to lead to the same façade of variety cities around the world. The fist view is focused to globalization , this gives many countries a opportunity to grow dramatically which haven't seen in time past. People could access and take knowledge and information from different resources therefore they can update latest modern architecture forms from other countries. In addition, the development is also keep their mind up with global living standard, subsequently, they express it in their houses such as villa, residence and apartment which are recently having the same form in different countries. Furthermore, at that time, the international companies develop their branches all around the world, as a result, they create the same architecture in everywhere they locate their companies such as banking buildings, office buildings and supermarkets.

Recently, that attendances seem a good way to improve our lives. However, many architectural experts recommend that every country should recognize their primary characters and use it in local architecture to prove for sustainable development in future. For example, in my country, architects are demand that their designs could compromise with tropical weather, especially, buildings must be stand from many heavy tropical rains. As a consequence, architectures in my country have a large roof which extend far form body of building. Moreover, louvers were used to prevent people from the heat of sunshine, this leads to the same façade of many building with a lot of vertical line. In other regions, thinking of architectural designs must be change belonging to different situation and its culture.

Depend on every country and their plans to develop country for along time. If their government has a sustainable plan, they will have a good result, in which every country has the opportunity to improve the living standard of their residents, coordinating with introduce their individual culture.

Revised

These days, the idea that globalization will ~~provide~~give the same living standard for people all around the world seems s at first glance a fair aspiration. However, it makes s ~~the~~ assumption that domestic factors of every society will ~~be~~ change. This also includes s local architecture which used to reflect the culture and society of a country. There are many advantages s in the recent trends ~~of~~in architecture but how ~~we~~ can we offer ~~preserve the~~ individual characters s of a country's culture in every building ~~to and~~ discriminate ~~with them from~~ others?.

There are many effects to lead to the same façade of variety cities around the world. The first view is focused ~~to on~~ globalization, this gives many countries a opportunity to grow dramatically which haven't been seen in time past. People could access and take knowledge and information from different resources therefore they can update latest modern architecture forms from other countries. In addition, the development ~~is~~ also keep their mind up with global living standard, subsequently, they express it in their houses such as villa, residence and apartment which are recently having the same form in different countries. Furthermore, ~~at that time, the~~ as international companies develop their branches all around the world, ~~as a result,~~ they create the same architecture ~~in~~ everywhere they locate their companies such as banking buildings, office buildings and supermarkets.

Recently, ~~that attendances this has~~ seemed a good way to improve our lives. However, many architectural experts recommend that every country should recognize their primary character~~istic~~s and use ~~it them~~ in local architecture to provide for a sustainable development in the future. For example, in my country, architects ~~are demand that must be sure~~ their designs ~~could~~ compromise with tropical weather, especially, ~~buildings Buildings~~ must ~~be~~ withstand ~~from~~ many heavy tropical rains. As a consequence, ~~architectures buildings~~ in my country often have ~~a~~ large roofs s which extends s far ~~form from the~~ body of building. Moreover, louvers ~~are were~~ used to ~~prevent~~ keep people from the heat of sunshine., ~~this~~ This leads to the same façade ~~of on~~ many buildings, with a lot of vertical lines s. In other regions, ~~thinking of~~ architectural designs must ~~be~~ change ~~belonging to in accordance with~~ different situations s and ~~its~~ cultures s.

~~Depend on e~~Every country ~~and their must have~~ plans to develop ~~country for along time. If their government has a in a~~ sustainable planway. If, they do, they will have a good result, in which every country ~~has the will have the~~ opportunity to improve the living standard of their residents, ~~while coordinating with introduce perserving~~ their individual culture.

Way too long for IELTS at 387 words, and far too much translation. Try to write less difficult sentences with simple words. Content is not that important! (Your content here, though, is very good).
