

The line graph below gives information on cinema attendance in the UK. Write a report for a university lecturer describing the information given.

The graph shows differences in cinema attendance by age in Great Britain between 1984 and 2000. Overall, Britain of all age tended to go to the cinema more than at the start of the period.

The biggest change was the cinema attendance of the 15-24 age group. It increased from 1984 to over 1989 then strongly fluctuated. Until 2000, the cinema attendance of this group advanced to nearly 55%.

The number of people of the two age groups: 7-14 and 25-35 were both firmer. However, from 1999 to 2000, the number of people of the 25-35 age group went up while the 7-14 age group went down.

The smallest change was the cinema attendance of the 35 and over- age group. This group also fluctuated the least in four groups. It rose from about 1% to approximate 15%.

In conclusion, although there were fluctuations in the percentage of cinema attendance of different age groups in Great Britain , all four groups grew up. The most dramatic rise was the 15-24 age group.

Revised

The graph shows differences in cinema attendance by age in Great Britain between 1984 and 2000. Overall, people in Britain of all ages tended to go to the cinema more than at the start of the period.

The biggest change was in the cinema attendance of the 15-24 age group. It increased from 1984 to over 1989, and then strongly fluctuated. ~~Until~~In 2000, the cinema attendance of this group advanced to nearly 55%.

The number of people of the two age groups, 7-14 and 25-35, were both firmer. However, from 1999 to 2000, the number of people of the 25-35 age group went up, while the number in the 7-14 age group went down.

The smallest change was in the cinema attendance of the 35 and over- age group. The number of cinema goers in tThis group ~~also~~fluctuated the least ~~in~~of the four groups. It rose from about 1% to approximate 15%.

In conclusion, although there were fluctuations in the percentage of people attending the cinema ~~attendance of~~ different age groups in Great Britain, all four groups grew went up. The most dramatic rise was in the 15-24 age group.

Good job. Perfect length, good opening, accurate 'overall' sentence, and good organization. Note that you need to be specific in using noun phrases. Example: The number of people fluctuated, not the people....
