

The chart shows the number of mobile phones and landlines per 100 people in Canada, US, Germany, UK, Sweden and Italy:

In general, Denmark is the most country having the highest equal number of both mobile phones and landlines than other countries in the list with over 80 for each (respectively) while its landlines` number is around 90 which becomes the most impressive landlines number compared with the others. Meanwhile, Italy is recorded as a country with the highest number of mobile phones up to nearly 90.

but with its number of landlines a bit over 40 that marks down Italy as a country of lowest number in that list. And Canada also is put behind the list with its lowest number of mobile phones nearly 40.

The other countries such as UK and Sweden have their numbers of mobile phones really remarkable up to over 80, but their land lines` numbers are smaller - nearly 60 and 65 respectively. In the same way, US and Germany have almost same number of landlines of around 60 (the same with that number of Canada) but the number of mobile phones vary from nearly 50 for US to over 70 for Germany.

Overall the figures show that almost European countries in the list having their number of mobile phones are much higher than those of their landlines, and it also seems nearly a double number compared with the number of mobile phones in North America countries, while North America countries have their number of landlines are much higher than those of their mobile phones.

Revised

The chart shows the number of mobile phones and landlines per 100 people in Canada, US, Germany, UK, Sweden and Italy.

In general, Denmark is the ~~most~~ country having the highest ~~equal total~~ number of both mobile phones and landlines, ~~than other countries in the list~~ with over 80 for each (respectively,) while its landlines` number is around 90 which ~~becomes is~~ the most impressive landlines number compared with the others. Meanwhile, Italy is recorded as ~~a the~~ country with the highest number of mobile phones, ~~up to with~~ nearly 90.

~~but with~~ However, its number of landlines a ~~just a~~ bit over 40, ~~and~~ that marks down Italy as a country ~~of with the~~ lowest number in that list. And Canada also is put behind the list with ~~its lowest a low~~ number of mobile phones, nearly 40.

The other countries such as UK and Sweden have ~~their a remarkable~~ numbers of mobile phones, ~~really remarkable~~ up to over 80, but their land lines` numbers are smaller - nearly 60 and 65 respectively. In the same way, US and Germany have almost ~~the~~ same number of landlines ~~of at~~ around 60 (the same with that number of Canada) but the number of mobile phones vary from nearly 50 for US to over 70 for Germany.

Overall the figures show that almost European countries in the list hav~~ing their number of~~ more mobile phones ~~are much higher than those of their~~ ~~than~~ landlines, and it also seems nearly a double number compared with the number of mobile phones in North America countries, while North America countries have ~~their number of~~ ~~many~~ more landlines ~~are much higher than those of their~~ ~~than~~ mobile phones.
