

Task 1
 You should spend about 20 minutes on this task.

The graph below shows the contribution of three sectors – agriculture, manufacturing, and business and financial services – to the UK economy in the twentieth century.

Summarize the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

Year	Agriculture (%)	Manufacturing (%)	Business and Financial (%)
1900	48	45	7
1950	52	38	10
1975	10	32	20
2000	2	15	35

Task 2
 You should spend about 40 minutes on this task.
 Write about the following topic:

To some people studying the past has little value in the modern world. Why do you think it is important to do so? What will be the effect if children are not taught history?

Give reasons for your answer and include any relevant examples from your own knowledge or experience.
 Write at least 250 words.

The data shows the percentage of three main fields—agriculture, manufacturing, and business and financial services contributed to the UK economic from 1900 to 2000 with the different developments.

In terms of the proportions in 1900, we see that agriculture made up the most significant role in the economic with nearly 50% as well as the second sector with the relatively lower level in 45% while business and financial services had a smallest account in the total, just approximately one-tenth compared with the first one.

In 1950, agriculture made a contribution in the larger 2% in the range while others had a considerable changes. Manufacturing dropped to 40% but the third part increased enormously to fold the portion in two. It kept a big rise in the next year whereas another fields went down to the lower accounts.

There was a boom in business and financial service with a two fold increase led to its decisive role in the national economy. Two remaining parts also reduced sharply, less than a half with the previous years. Particularly, agriculture took a lowest portion in the contribution.

Overall, agriculture no longer keep the decisive position in the UK economy, instead of, business and financial services are more and more salient with the wide changing year by year.

Revised

The data shows the percentage contribution of three main fields-agriculture, manufacturing, and business and financial services ~~contributed~~ to the UK economy ~~ie~~ from 1900 to 2000 ~~with the different developments~~.

In terms of the proportions in 1900, we see that agriculture ~~made up~~ played the most significant role in the economy ~~ie~~ with nearly 50%, ~~while manufacturing was as well as~~ the second sector with the relatively lower level in 45% while business and financial services had ~~a the~~ smallest account in the total, ~~just~~ approximately one-tenth compared with the first one.

In 1950, agriculture made a contribution ~~in the larger~~ 2% ~~in the range~~ larger while others ~~also had a~~ made considerable changes. Manufacturing dropped to 40% but the third part increased enormously to fold the portion in two. ~~It kept made~~ a big rise in the next year whereas another fields went down to the lower accounts.

There was a boom in business and financial service with a two fold increase ~~leaded~~ leading to its decisive role in the national economy. ~~The t~~ Two remaining parts also reduced sharply, ~~to~~ less than a half ~~with the level of~~ the previous years. Particularly, agriculture took a ~~lowest~~ portion in the contribution.

Overall, agriculture ~~no longer~~ ~~keep held~~ the decisive position in the UK economy ~~ie~~ ~~instead of~~, business and financial services ~~are were~~ more and more salient ~~with the wide changing~~ year by year.

Very good but long – over 200 words. Be careful not to translate too much. You do a v. good job using the trend and comparison language and the organization is good too. Just take care to use English sentences you have confidence in and you'll do outstanding work.
